                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               95 LenglyTyrtenHiscysGlnValSerGlyPhetenMetelytenSerVa lll
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                78 loTyrProTyrProLeuValLeuMetSerIlePheAsnAsnGlyTrpAsn 94 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                          1815

"Cloning and functional analysis of a polymorphic variant of the owine

Mel la melatonin receptor."

Ricchim. Biophys. Acta 1356-294-307(1947)

FUNCTION. HIGH AFFINITY PECEFFORE FOR MELATONIN. LIKELY TO MEDIATES

THE REPRICUCITY AND CINCADIAN ACTIONS OF MELATONIN. THE ACTIVITY

OF THIS RECEPTOR IS MEDIATED BY PERTUSSIS TOXIN SENSITIVE G

OF THIS RECEPTOR IS MEDIATED BY PERTUSSIS TOXIN SENSITIVE G

PROTEINS THAT INHIBITS ADENVIATE CYCLASE ACTIVITY

OF STRUCTULAR FORMATION. INFERGRAL MEMBRANE PROTEIN.

THE SIMILARITY: HELONGS TO FAMILY 1 OF G-PROTEIN COURSED RECEPTORS.
     VARIANT
                                                                                                                                                                                                                                                                                            PRINTITE: PRANTENT: G.PROTEIN_PROCEP_F1_1; 1.

PROSITE: FSS0262; G.PROTEIN_PROCEP_E1_2; 1.

G-protein coupled receptor: Transmemblane: Glycoprotein: Pulymorphism.
